TOPIC

- 1 The equation of line  $L_1$  is  $y = 5x + 1$   
The equation of line  $L_2$  is  $5y + x = 20$

Show that these two lines are perpendicular.

$$y = 5x + 1$$

$$\text{gradient} = 5$$

$$5y + x = 20$$

$$5y = 20 - x$$

$$y = 4 - \frac{1}{5}x$$

$$\text{gradient} = -\frac{1}{5}$$

$$5 \times -\frac{1}{5} = -1 \text{ therefore } L_1 \text{ and } L_2 \text{ are perpendicular}$$

- 2 The equation of line  $L_1$  is  $y = 8 - 3x$   
The equation of line  $L_2$  is  $9y - 3x - 6 = 0$

Show that these two lines are perpendicular

$$y = 8 - 3x$$

$$\text{gradient} = -3$$

$$9y - 3x = 6$$

$$9y = 6 + 3x$$

$$y = \frac{6}{9} + \frac{3}{9}x$$

$$\text{gradient} = \frac{1}{3}$$

$$-3 \times \frac{1}{3} = -1 \text{ therefore } L_1 \text{ and } L_2 \text{ are perpendicular}$$

- 3 The equation of line  $L_1$  is  $2y = x + 10$   
 The equation of line  $L_2$  is  $4y + 8x = 16$

Show that these two lines are perpendicular.

$$\begin{aligned}
 2y &= x + 10 \\
 y &= \frac{1}{2}x + 5 \\
 \text{gradient} &= \frac{1}{2}
 \end{aligned}$$

$$\begin{aligned}
 4y + 8x &= 16 \\
 4y &= 16 - 8x \\
 y &= 4 - 2x
 \end{aligned}$$

$$\text{gradient} = -2$$

$$\frac{1}{2}x - 2 = -1 \text{ therefore } L_1 \text{ and } L_2 \text{ are perpendicular}$$

- 4 The equation of line  $L_1$  is  $y = \frac{3}{4}x + 1$

The equation of line  $L_2$  is  $6y + 8x = 30$

Show that these two lines are perpendicular.

$$\begin{aligned}
 y &= \frac{3}{4}x + 1 \\
 \text{gradient} &= \frac{3}{4}
 \end{aligned}$$

$$\begin{aligned}
 6y + 8x &= 30 \\
 6y &= 30 - 8x \\
 y &= 5 - \frac{8}{6}x \\
 \text{gradient} &= -\frac{4}{3}
 \end{aligned}$$

$$\frac{3}{4}x - \frac{4}{3} = -1 \text{ therefore } L_1 \text{ and } L_2 \text{ are perpendicular}$$

- 5 The equation of line  $L_1$  is  $2y = 3x - 4$   
 The equation of line  $L_2$  is  $8y - 12x - 40 = 0$

Show that these two lines are **not** perpendicular.

$$\begin{aligned}
 2y &= 3x - 4 \\
 y &= \frac{3}{2}x - 2 \\
 \text{gradient} &= \frac{3}{2}
 \end{aligned}$$

$$\begin{aligned}
 8y - 12x &= 40 \\
 8y &= 40 + 12x \\
 y &= 5 + \frac{12}{8}x \\
 \text{gradient} &= \frac{3}{2}
 \end{aligned}$$

Both gradients are the same so  $L_1$  and  $L_2$  are parallel not perpendicular
